Duct Mount Humidifier

Model 700W

The Model 700W power humidifier features truly automatic control, so there's no need to ever manually control the humidifier. It is also designed with ease of service in mind. It utilizes an outdoor temperature sensor for monitoring even the slightest changes in outdoor temperature. This high-tech humidification system can deliver up to 50% more moisture in comparison to competitive units. With flexibility in mind, it can even be installed in manual mode if necessary. Complementing any Decor, the 700W looks like any other HVAC vent. It has an evaporation capacity of 0.75 gallons per hour, among the highest capacity humidifiers sold. If you own a larger home and want the best, then this may be the humidifier for you, as it will handle up to 4,200 square feet.

- ✓ High Capacity
 - For larger homes
- ✓ No Water Reservoir
 - No place for bacteria/mold growth
- ✓ Self Cleaning Design
 - No scaling buildup
- ✓ Unique Control Prevents Over Humidifying
 - No wither mold growth due to too high humidity
- ✓ Easy Installation & Maintenance
 - Replace one water panel annually
- ✓ Recessed Design
 - Looks Like an Ordinary Vent
- ✓ 2 Year Warranty [excluding water panel]

System Design & Operation Prevents the Possibility of Mold & Bacteria Growth

The Model 700 is equipped with an outdoor temperature sensor & an indoor humidistat. These two devices work in conjunction to provide the proper amount of moisture based on the environmental conditions. This is important as over humidifying can cause problems such as condensation and development of mold & mildew. It is important to note there is *No Water Reservoir or Water Retention!* This means no standing water to grow bacteria and mold which produce odors, maintenance issues and unhealthy conditions.
